

Superior Rig Solutions Ltd. **AUTOMATED STABBING BOARD**

Designed To Be Safer & More Efficient!

FEATURES AND BENEFITS

- Fully adjustable to fit all derricks
- Safe and easy to operate
- Screw driven - no winch or brake mechanism, therefore no chance of basket falling
- Scissors in and out from derrick keeping worker out of harm's way
- Minimal rig up / out time - installs in minutes
- Air or hydraulic control for hazardous locations
- No assembly required on rig floor - hoist into position on derrick and secure with safety cables provided
- Less than 2 feet clearance needed
- Track pivots at top to align with hole centre
- Canadian & USA Patent Pending

With the growing demand for rigs to use top drives and the decrease in room that these rigs have to work in, Superior Rig Solutions has recognized the need for a safer design for the Stabbing Basket. The Automated Stabbing Board is just that.

The Automated Stabbing Board hooks securely to the derrick leg allowing more room for the top drive and blocks to pass by. The man basket is moved up and down using a threaded shaft eliminating any chance of falling. Therefore no brake mechanism is required.

The Automated Stabbing Board can also be moved out to the hole centre to stab casings and latch elevators and then brought back in to the derrick out of the way of the top drive and blocks.
